Descriptors--\*Adult Education, Astronomy, Broadcast Television, \*College Instruction, College Students, Continuous Learning, Educational Television, \*Extension Education, History, Instructional Television, Questionnaires, Social Sciences, Telecourses, \*Televised Instruction, Television Curriculum, \*Television Surveys, Television Viewing

A survey was conducted, in the fall of 1966, of students' reaction to three college credit courses, Astronomy, Latin America I, and Latin America II, broadcast in major cities in the State of New York. The 608 viewers who were sent questionnaires did not represent all viewers, but rather those interested enough to write in for materials. Sixty-eight percent of these responded to the mailed questionnaire. Most of the viewers watched most of the programs, and in the evening. Viewers preferred to watch on weekday evenings. They found the courses interesting and satisfactory, and on a par with, or better than, classroom or other TV courses. Social science subjects were largely preferred for future programs and, in the existing programs, male viewers preferred Astronomy, while female viewers favored the History courses. Most viewers were aged over thirty, and housewives watched the program more than any other group. Students (including housewives) made up 40 percent of the credit viewers. Telecourses in the future should be field tested for learning, should have evaluation built into them, and should be given more publicity. (GO)

## INTRODUCTION

In the fall of 1966 three college credit courses, *Astronomy*, *Latin America I* and *Latin America II* were broadcast in major cities in the state. This survey was done to obtain the students' reaction to the courses. The television survey was based on a questionnaire developed by the Instructional Resources Center at State University of New York.\* Produced in the Spring of 1966, the questionnaire was field tested at that time with over 300 viewers. It was revised in the Fall of 1966 and sent out to 608 viewers who had either registered for the course or had written in for the syllabus. These do not represent all the viewers, but rather those who were interested enough to write in for the materials. The questionnaires were sent out in early December 1966 and 68 percent of them were returned by January, 1967, which is a very good response to a mailed questionnaire.

Table I shows the returns from the areas.

TABLE I  
QUESTIONNAIRE DISTRIBUTION

LOCATION	MAILED	RETURNED	PERCENT RETURNED
Albany	194	120	62%
Buffalo	93	79	85%
Brockport	48	38	79%
Geneseo	57	46	81%
Oswego	9	8	89%
Onondaga	67	48	72%
New York	140	72	51%
Total	608	411	68%

\*See Appendix for Questionnaire

The highest returns were from Buffalo and Oswego at 85 percent and 81 percent respectively, and the lowest from New York at 52 percent, and Albany at 62 percent. However, numerically, Albany, Buffalo, and New York account for two-thirds of all responses. Albany (from Question Number 3) accounted for almost half of the credit students, with Buffalo supplying another quarter. New York accounted for only 5 percent of the credit students but a quarter of the non-credit students.

The questionnaire is tabulated on a percentage basis for comparison, but the base for comparison is given at the top of the chart. For example, the base for credit students in Astronomy in Question Number 1 is 97 while the base for non-credit is 143. That is, 97 represents 100 percent of the credit students and 143 represents 100 percent of the non-credit students in Astronomy for Question Number 1. This base varies from question to question depending on the number of students who answered the particular question. For example, the base for credit students in Astronomy for Question Number 4 is 95.

The survey covers only those who registered and watched or wrote in for the syllabus. It is not a representative sample of the total viewers, and is not a representative sample of the potential viewers in the state. The results did not consider correlations or statistical differences as this was outside the scope of the study. In 1960 there were approximately 313,000 pupils in college or about 2 percent of the population, and our sample is only 413 viewers.\*

\*Ober, B. H., *Measuring Television Audience*, A. C. Nielsen Co., New York, 12 pp. reprint for Mediascope Magazine. A sample size of 300 is used to get an estimate of the audience of programs in the Chicago area (P. 3).

Table II shows a comparison of the sample with the general population of the state.

**TABLE II**      **SOCIO-ECONOMIC COMPARISON**      **STATEWIDE AND QUESTIONNAIRE SAMPLE**

<u>FOR COMPARISON</u>	<u>STATE</u>	<u>SAMPLE</u>
Educational Level	High School	Beyond High School
Occupation	Skilled	Professional
Sex	Same Distribution	Same Distribution
Age	Under 40	Over 40

This chart is based on the mode for simplicity. That is, it concentrates on the largest groups within the state or sample and not the average or median.

The various areas within the state did not seem to vary significantly with regard to age, school level and occupation as shown in Table III.

TABLE III      CHARACTERISTICS OF SELECTED STATE\* AREAS

<u>LOCATION</u>	<u>YEARS OF SCHOOL COMPLETED</u>	<u>OCCUPATION</u>			<u>AGE MODE</u>
		<u>PROF'L</u>	<u>SKILLED</u>	<u>OTHER</u>	
Albany	10.9 years	28%	36%	36%	No Entry
Buffalo	10.5	21	33	46	32-37 years
Rochester (Inc. Brockport)	11.0	24	32	44	37-43
Syracuse (Inc. Oswego, Onondaga)	11.3	19	36	45	No Entry
New York	10.8	25	35	40	37-45

In brief, the sample was better educated, older, and contained more professional people than the state as a whole or any large, identifiable urban area. Details of the samples' age, occupation, and other characteristics are given in the following charts.

\* U. S. Bureau of the Census, *Census of Population, 1960*  
Vol. I, *Characteristics of Population, Part 34 ABCD*,  
U. S. Government Printing Office, Washington, D.C., 1963

## SUMMARY

Thirty-one points were covered in the questionnaire and the results are summarized below. More detailed information is contained in the text.

1. How many of the television lessons did you view?  
Most viewers watched most of the programs.
2. When did you view the television lessons?  
Most viewers watched in the evening.
3. Where did you register for the course and/or receive the syllabus?  
48 percent of the credit viewers registered in Albany.  
25 percent in Buffalo.  
5 percent in New York City.
4. Did you take notes while viewing these television courses?  
Notes were taken by most of the students most of the time.
5. What times would be the most convenient for you to view television lessons?  
Viewers preferred to watch the television programs on a weekday evening.
6. How helpful was the syllabus in learning the material in the television courses?  
The syllabus was helpful in the courses.
7. Did you buy the textbooks(s) for this television course?  
Credit viewers bought the textbooks.
8. Was the textbook helpful in learning the material in this television course?  
The textbook was helpful.
9. How would you describe the content of this course?  
Most viewers were satisfied with the courses.
10. How would you describe the presentation of this course?  
The courses were interesting.
11. How do these television lessons compare to, the other courses you have taken,  
either by television or in the classroom?  
The courses were the same or better than classroom or other television courses.

12. If you watched repeat broadcasts of these television lessons, why did you do so?  
Repeat lessons were watched equally to either review or make up a lesson.
13. When did you last take a college course other than this particular television course? The courses were viewed by those still in college or out for more than four years.
14. In what way(s) are you presently continuing your higher education other than this television course?  
About a third of those continuing their education plan to do it by television.
15. If you are not now continuing your higher education, in what way(s) do you plan to do so?  
Two-thirds of those who plan to continue their education will do it by television.
16. What type of course do you want on television?  
Credit courses mainly undergraduate were most wanted by viewers.
17. How often would you be willing to attend a class meeting at a local college to obtain extra credit in a television course?  
Credit viewers will attend a meeting a week for extra credit.
18. What is your objective(s) in continuing your higher education?  
Credit viewers want a degree, non-credit viewers want enrichment.
19. Will further courses on television help you to achieve this goal?  
Most viewers felt television will help them obtain their goal.
20. How did you find out about this television course?  
The largest number of viewers learned of the course through the newspaper.
21. What program(s) in this television course did you like best and why?  
Many of the viewers liked all the programs.
22. Which program(s) in this television course did you like least and why?  
Dullness and disorganization were liked least by viewers.

23. What subjects would you like to see on future television courses?  
The social science subjects were preferred by future television viewers.
24. What comments describe your feelings about learning via television?  
Viewers liked the convenience of television.
25. Comments: Television courses are not too bad after all.
26. What course were you registered in?  
Astronomy had the most registrations.
27. Were you a credit or non-credit viewer?  
Most viewers were non-credit.
28. What is your highest educational level?  
College students or those aspiring to be so were three quarters of the viewers.
29. What is the sex of viewers?  
Males tended to take Astronomy and females the History courses.
30. What is the age of viewers?  
Most viewers were over 30.
31. What is the occupation of viewers?  
More housewives watched the courses than any other occupational group.

#1 HOW MANY TELEVISION LESSONS DID YOU VIEW?

This question had four alternatives from which the respondents could choose. If, however, we combine alternative number one, "First Few", and alternative two, "About Half", we can see that these viewers watched about half of the programs or less.

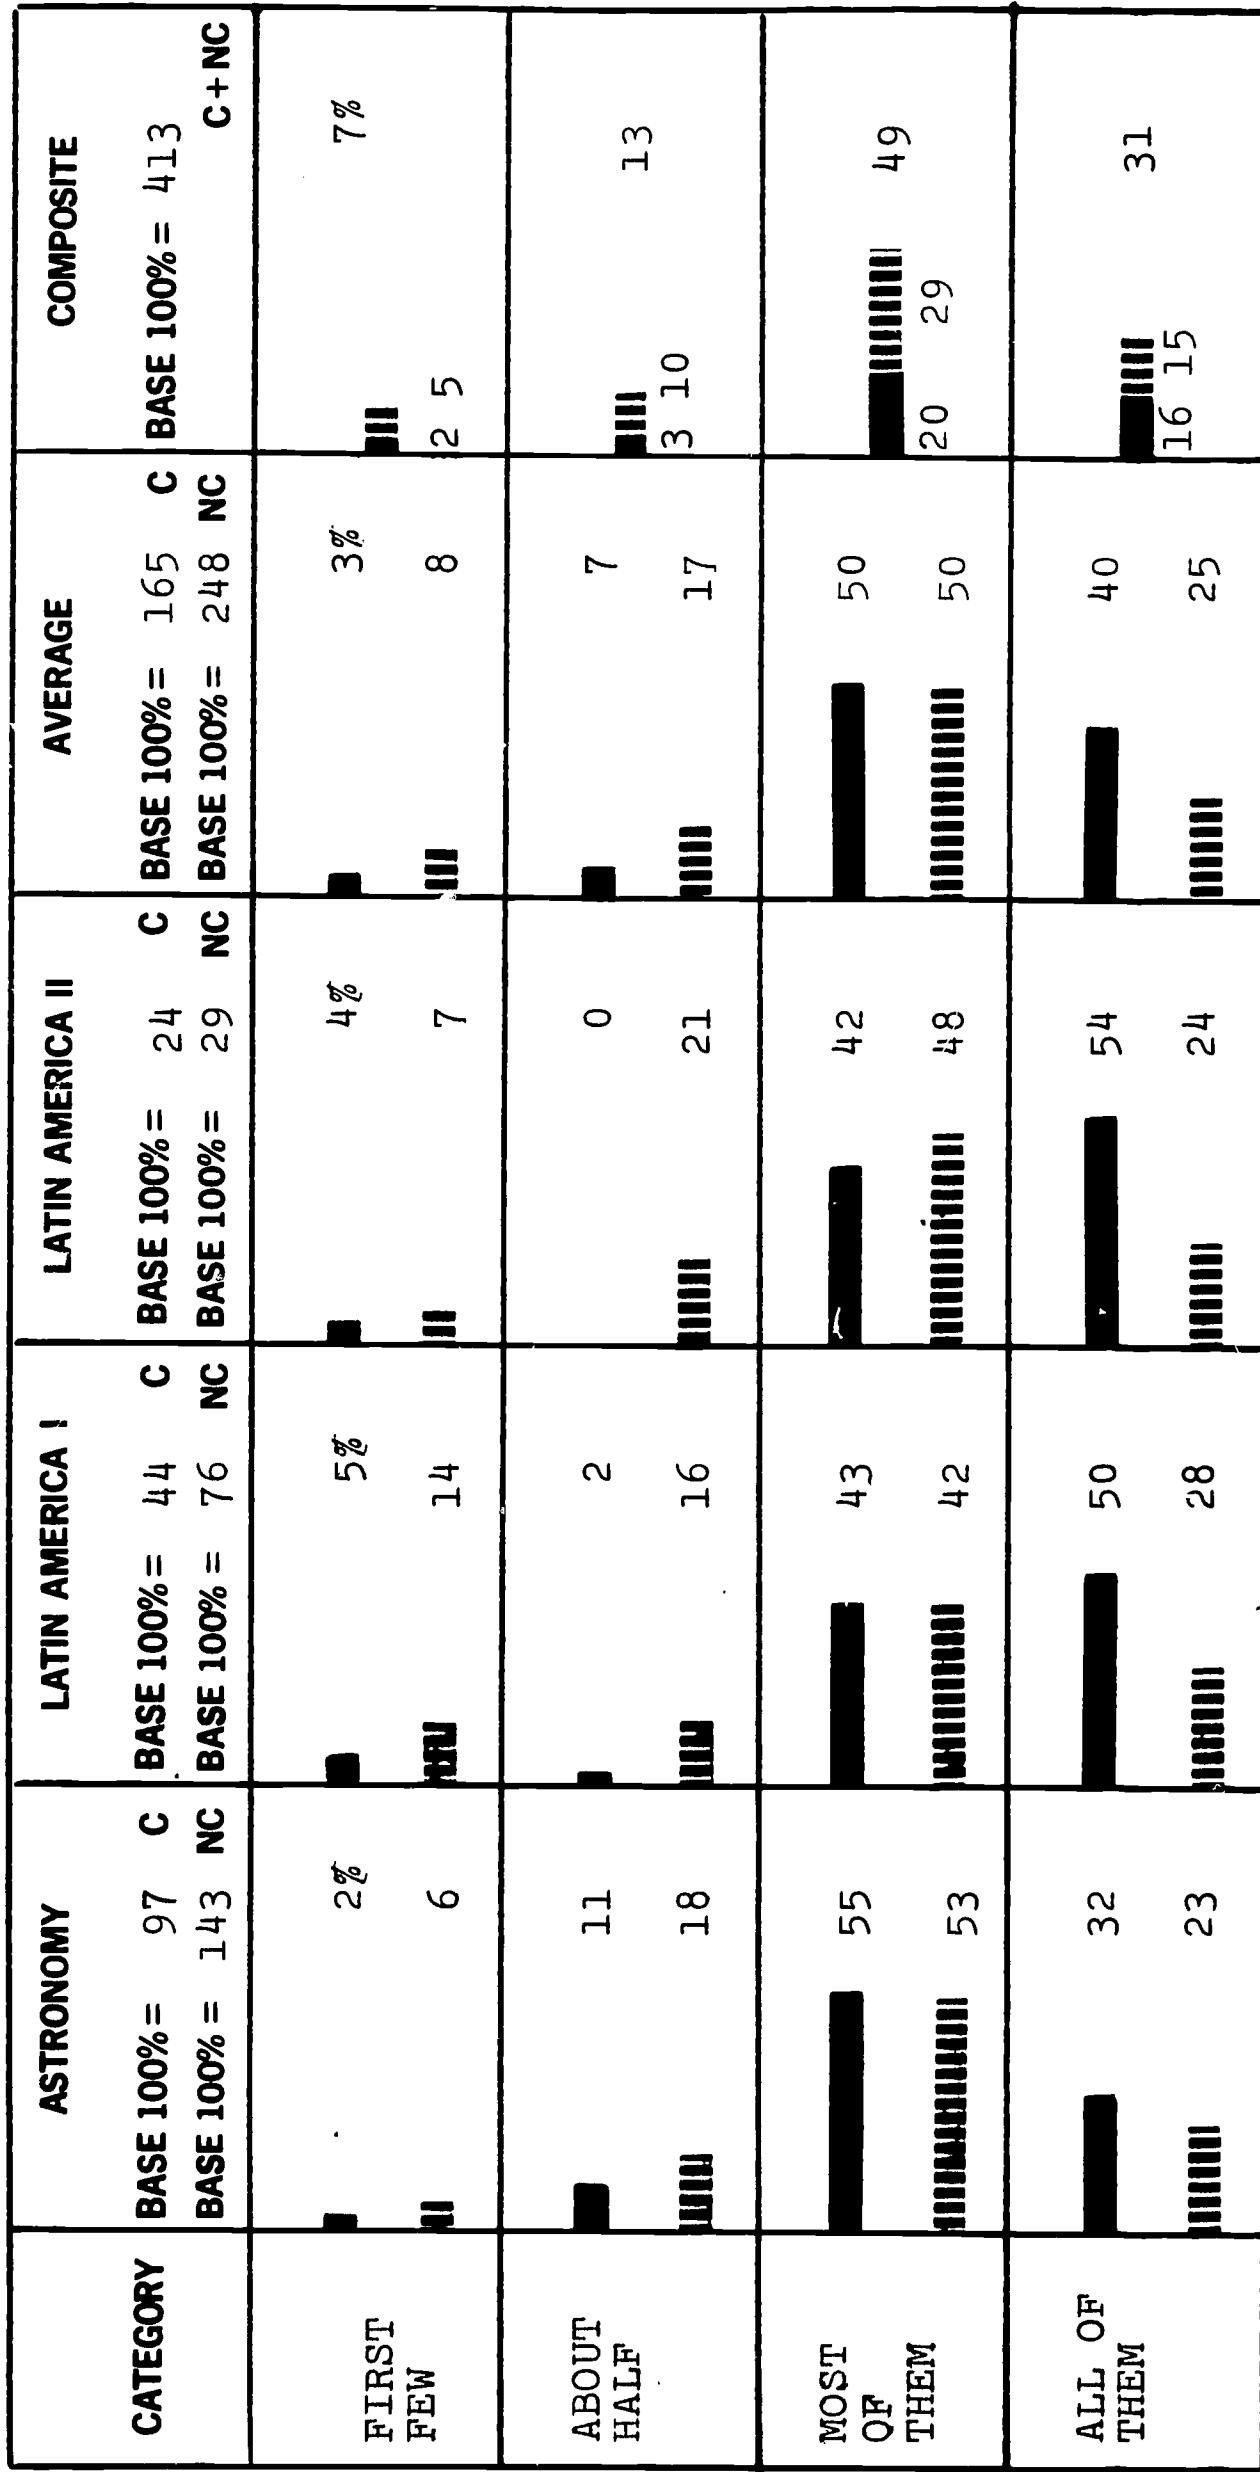

The composite chart when combined this way gives a total of 20 percent of the students who watched half or fewer than half of the programs. A combination of categories three, "Most of Them", and four, "All of Them", indicates on the composite group that 80 percent of the students watched enough programs to have completed the course. Non-credit students accounted for 15 percent of those not completing the course. Credit students accounted for only five percent of those not completing the course based on the total group.

Thus, 90 percent of the credit students viewed enough programs to have completed the course, and 75 percent of the non-credit students viewed sufficient programs to have completed the course. In Latin America II the completions increase to 96 percent while in Astronomy they decrease to 87 percent for the credit students.

## RESPONSE IN PERCENT TO

## QUESTION NUMBER 1 HOW MANY TELEVISION LESSONS DID YOU VIEW?

C-CREDIT

KEY: NC-NON-CREDIT  

#2 WHEN DID YOU VIEW THE TELEVISION LESSONS?

On a composite basis, that is, a percentage computed on the entire response, 58 percent of the group viewed the programs in the evening; 17 percent in the morning, 16 percent at different times and 9 percent in the afternoon. A morning showing and an evening showing would account for 75 percent of the viewers.

This varies from course to course and from credit to non-credit student. 75 percent of the non-credit Astronomy students viewed the course in the evening, while only 28 percent of credit students for Latin America II viewed it in the evening. However, in repeated showings, the law of diminishing returns seems to operate, with 58 percent viewing in the evening, 17 percent in the morning, 8 percent in the afternoon and 16 percent at various times.

This question is closely related to number five which asks "what time would be the most convenient for you to view the television lessons?". A weekday was preferred by 81 percent of the students, with 8 percent favoring Saturday and 11 percent favoring Sunday. The best morning hours were 7 to 9, the best afternoon 12 to 1, and the best evening 6 to 8.

A combination of question 2 and 5 indicates the best time is 6 to 8 in the evening, with the next best time 9 to 11 in the evening, and finally 7 to 9 in the morning.

By proportionately dividing "at different times" it is estimated that 70 percent watched in the evening, 20 percent in the morning, and 10 percent in the afternoon.

## RESPONSE IN PERCENT TO

## RESPONSE IN PERCENT TO

## QUESTION NUMBER 3 WHERE DID YOU REGISTER FOR THE COURSE AND/OR RECEIVE THE SYLLABUS?

C-CREDIT

KEY: NC-NON-CREDIT 

13 "WHERE DID YOU REGISTER FOR THE COURSE AND/OR RECEIVE THE SYLLABUS?"

The composit portion of the chart indicates that Albany and Buffalo accounted for 50 percent of all viewers with Albany alone accounting for 30 percent of the total. This may be indicative of the amount of local advertising. For example, Albany accounted for 70 percent of the credit students in Astronomy, and 48 percent of all credit students. This, of course, is way out of proportion to the population of the area. Perhaps this is a reflection not only of local advertising, but also local effort on the part of school officials or advisors.

RESPONSE IN PERCENT TO

QUESTION NUMBER 4 DID YOU TAKE NOTES WHILE VIEWING THESE  
TELEVISION COURSES?

KEY: C-CREDIT  
NC-NON-CREDIT

CATEGORY	ASTRONOMY		LATIN AMERICA I		LATIN AMERICA II		AVERAGE		COMPOSITE	
	BASE 100% =	C	BASE 100% =	C	BASE 100% =	C	BASE 100% =	C	BASE 100% =	C + NC
RARELY	88	42	132	71	106	23	28	23	391	106 C
OCCASION-ALLY	5	7	24	23	23	9	14	13	23	15
FAIRLY OFTEN	12	11	11	11	12	7	11	10	10	10
MOST OF THE TIME	75	80	86	86	86	43	50	43	50	32 18

**#4 DID YOU TAKE NOTES WHILE VIEWING THESE TELEVISION COURSES?**

The conclusion drawn from this chart is that most of the credit students took notes most of the time, while only about a third of the non-credit students took notes. With regard to notetaking, an interesting sidelight seemed to be that students in Latin America I and II had difficulty with Spanish names, although scientific names did not appear to be a problem in Astronomy.

**45 WHAT TIMES WOULD BE THE MOST CONVENIENT FOR YOU TO VIEW TELEVISION LESSONS?**

There were multiple answers on this question, but it was clearly indicated that weekdays were preferred by 81 percent of the viewers.

The evenings were preferred by 53 percent, with most of them preferring the hours 6 to 8. The next best time is 8 to 10. The mornings were preferred by 25 percent of the respondents, with most of them preferring the hours 8 to 9, although, the entire period of 7-9 seemed to be convenient. Teachers commented that 8:00 a.m. was not a good time for them to view due to their classroom schedules. The afternoons were preferred by 22% of the respondents, and the best time was from 12 to 1.

However, question two indicated that only 9 percent actually viewed in the afternoon. Question Number 5 is an opinion or preference question, while Number 2 is a historical question showing what the students actually did.

45 WHAT TIMES WOULD BE THE MOST CONVENIENT FOR YOU TO VIEW TELEVISION LESSONS?

WEEKDAY	81%	MORNING	25%
SATURDAY	8%	AFTERNOON	22%
SUNDAY	11%	EVENING	53%

Base 100% - 360

Base 100% - 380

<u>Morning</u>		<u>Evening</u>	
7-8	22%	12-1	22%
8-9	35%	1-2	17%
9-10	15%	2-3	12%
10-11	13%	3-4	12%

		5-6	17%

Base 100% - 223

Base 100% - 192

Base 100% - 465

¶6 HOW HELPFUL WAS THE SYLLABUS IN LEARNING THE MATERIAL IN THE TELEVISION COURSE?

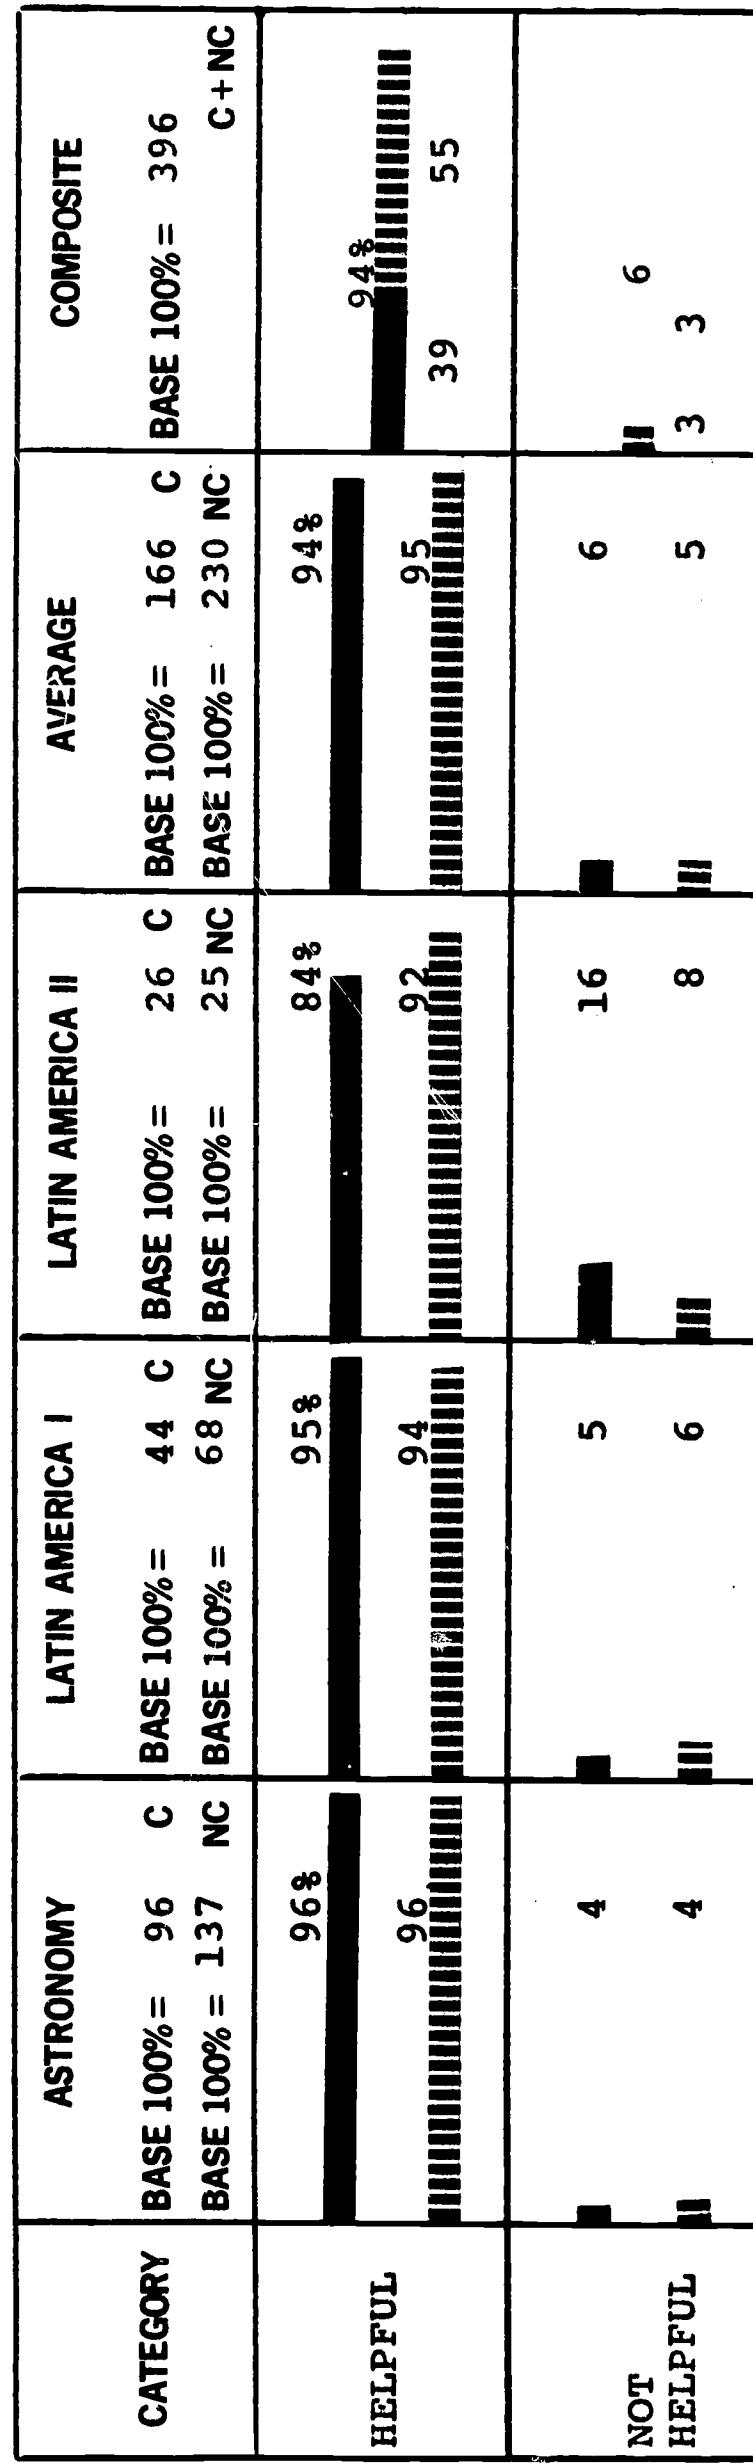

Some ninety-four percent of the students found the syllabus helpful. This is particularly evident in Astronomy and Latin America I. However, 16 percent of the credit students did not find the syllabus helpful in Latin America II. This number is more than three times that of Latin America I and four times that of Astronomy. This indicates that this particular syllabus probably needs revising.

## RESPONSE IN PERCENT TO

## QUESTION NUMBER 6 HOW HELPFUL WAS THE SYLLABUS IN LEARNING THE MATERIAL IN THE TELEVISION COURSE?

C-CREDIT

KEY: NC-NON-CREDIT

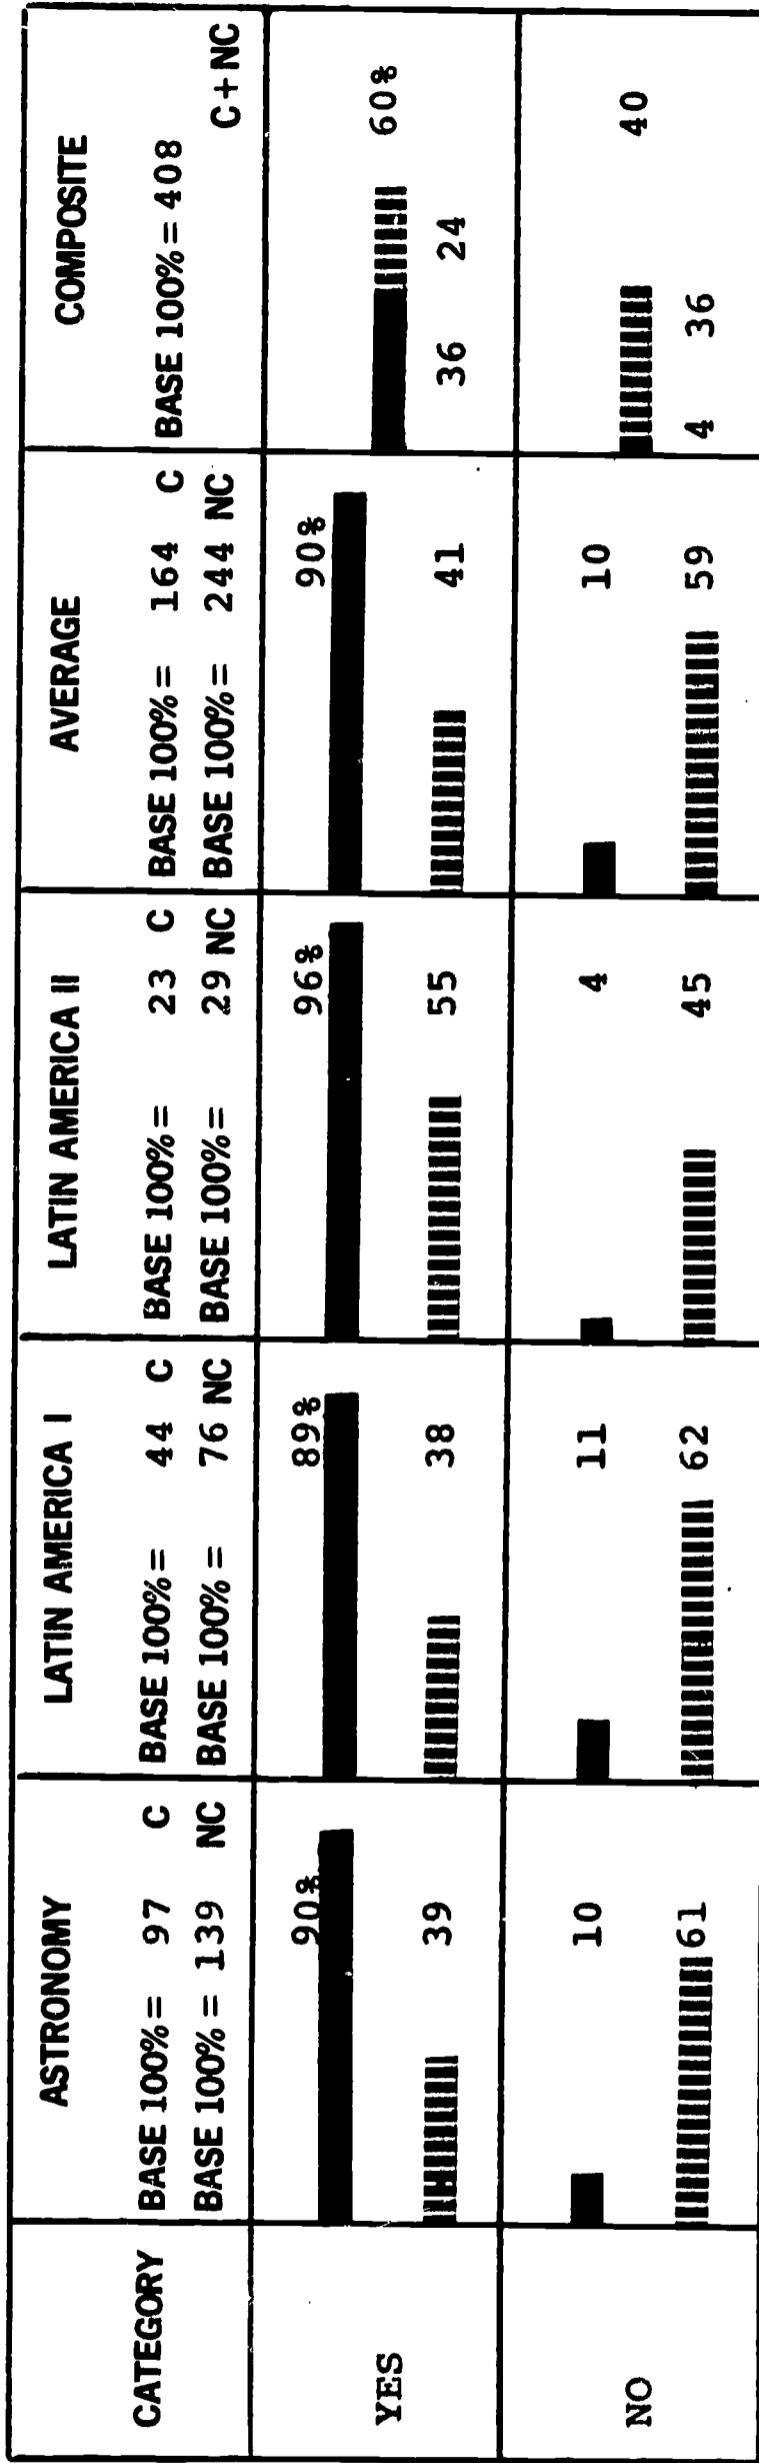

#7 "DID YOU BUY THE TEXTBOOK(S) FOR THIS TELEVISION LESSON?"

90 percent of the credit students purchased the textbook. Incidental comments, however, indicated that some students borrowed the book or obtained it by some other means. Approximately 60 percent of the non-credit students did not obtain the text. Some suggested that college bookstores handle the text on a mail order basis.

RESPONSE IN PERCENT TO

QUESTION NUMBER 7 DID YOU BUY THE TEXTBOOK FOR THIS  
TELEVISION COURSE?

KEY: C-CREDIT ■■■■■  
NC-NON-CREDIT ■■■■■

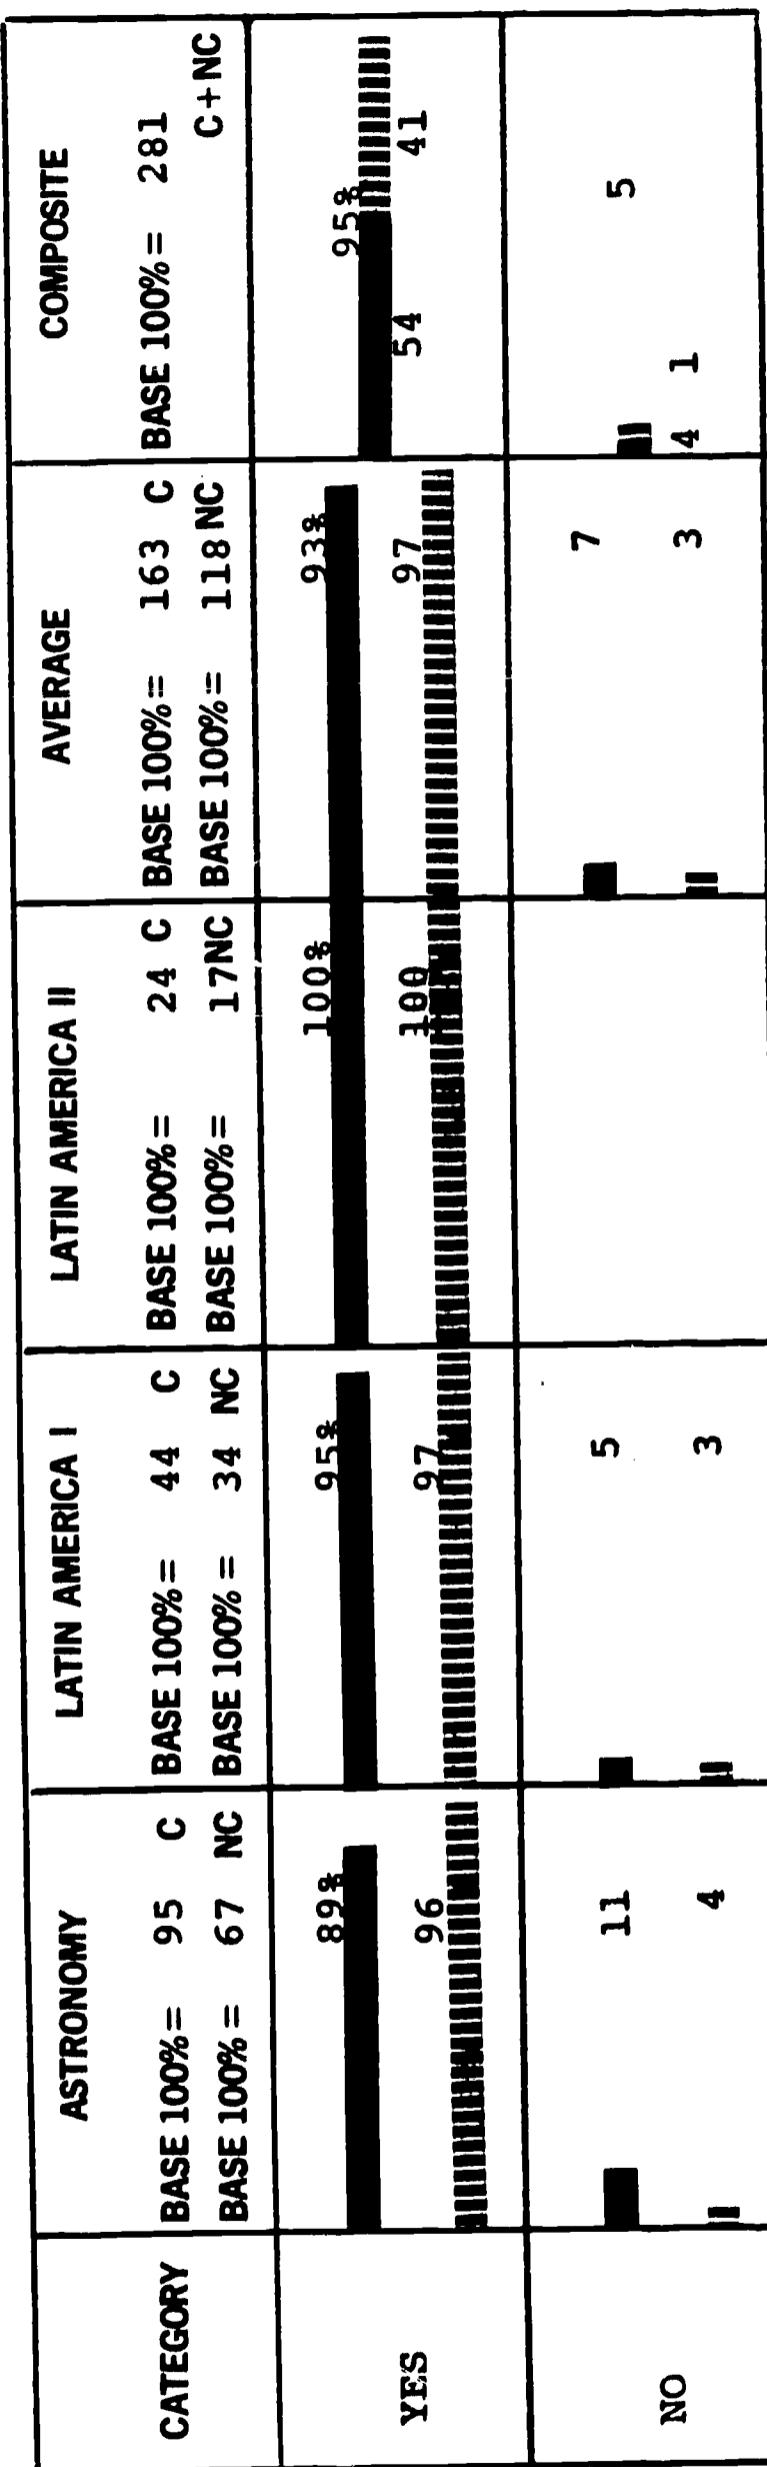

#8 "WAS THE TEXTBOOK HELPFUL IN LEARNING THE MATERIAL IN THE TELEVISION COURSE?"

958 of the viewers found the textbook helpful in all the courses, although 11 percent of the credit astronomy students did not find the book helpful. However, only about two-thirds of the viewers answered this; these who did not answer were mainly non-credit students who did not procure a text. Non-credit students who bought the book found the text more helpful than credit students.

RESPONSE IN PERCENT TO

QUESTION NUMBER 8      WAS THE TEXTBOOK HELPFUL IN LEARNING THE MATERIAL IN THIS TELEVISION COURSE?

KEY:    C-CREDIT    █  
        NC-NON-CREDIT    ████

#9 "HOW WOULD YOU DESCRIBE THE CONTENT OF THIS COURSE?"

Most of the non-credit students felt the course was "just right". The credit students did not agree with this judgment. The Astronomy course was considered "too hard" by 20 percent of the credit students.

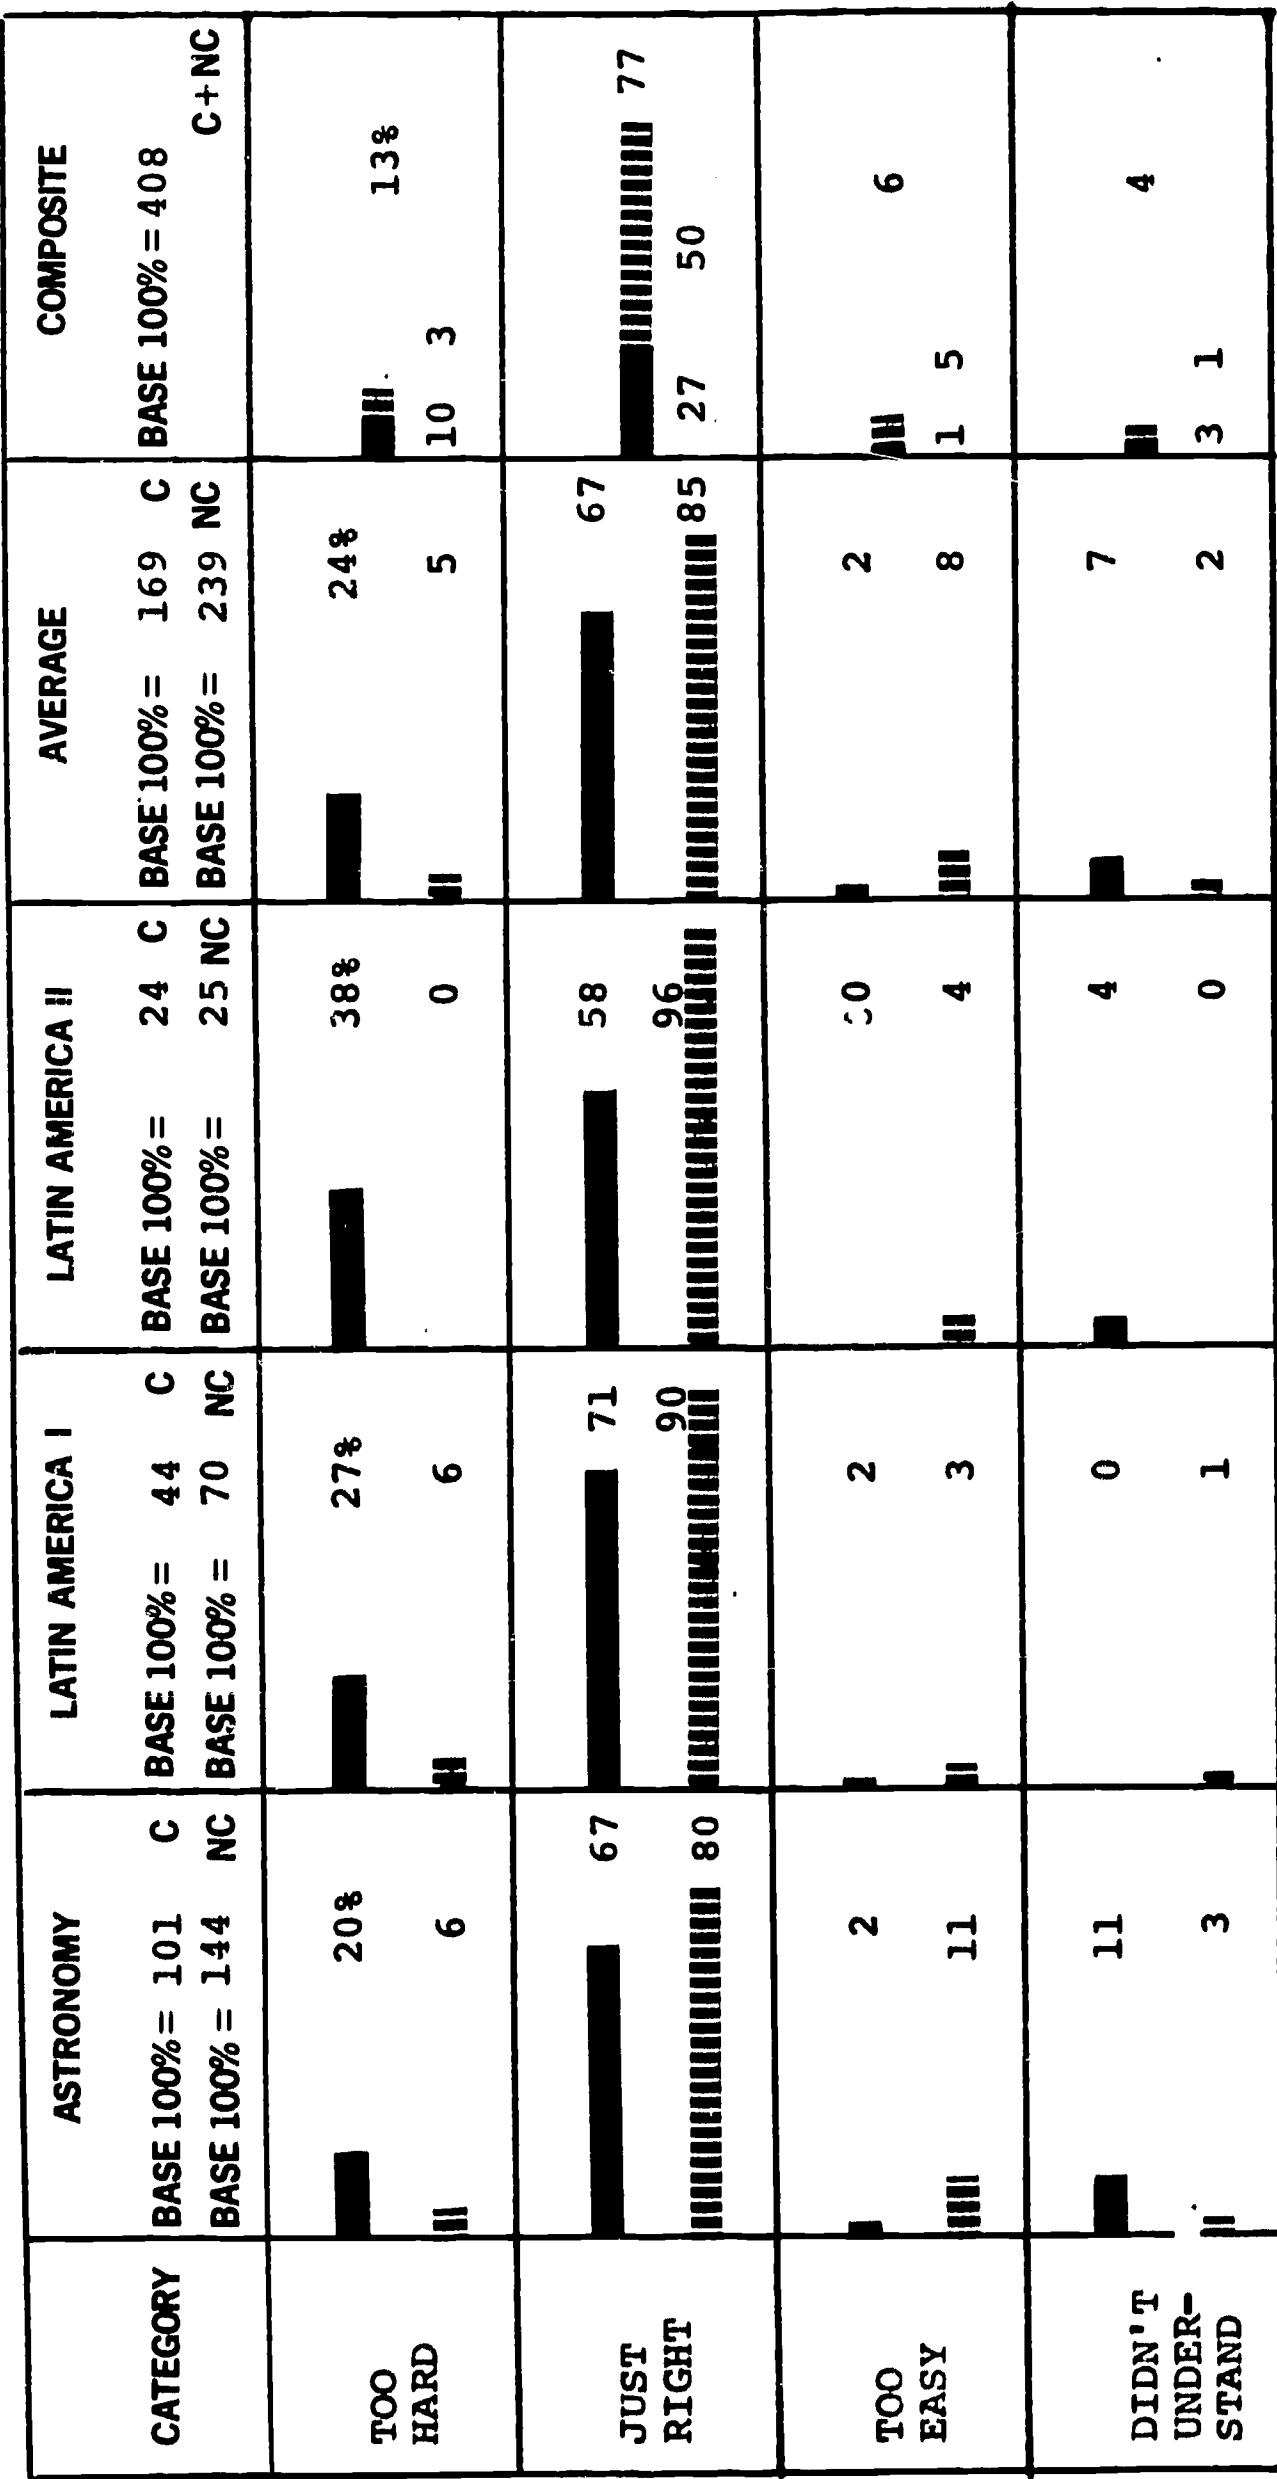

The percentage of students who found the course "too hard" increased to 27 percent of Latin America I and 38 percent for Latin America II.

The difficulty seems to be in the organization of the courses which in a sense merely stimulate classroom teaching. The students are scattered, having little contact with the instructor and other students. Success in a regular course depends on contact with other students and the instructor, as well as resource facilities. A television course has to be extremely well organized to be effective. It was the organization, not the content, which made the difference in difficulty. Astronomy was better organized than the others and used many more resources. Perhaps a sampling of tapes can be made with a student response system to evaluate and readjust the lessons so they are more understandable to the student. This does not mean that the course should be "diluted", rather the same content should be "programmed" by response systems and organized around learning rather than teaching.

## RESPONSE IN PERCENT TO

## QUESTION NUMBER 9 HOW WOULD YOU DESCRIBE THE CONTENT OF THIS COURSE?

KEY: C-CREDIT   
NC-NON-CREDIT 

#10 HOW WOULD YOU DESCRIBE THE PRESENTATION OF THIS COURSE?

The students for the most part thought that the courses were interesting. If the category interesting is combined with the category stimulating then 95 percent of the non-credit students and 89 percent of the credit students were not only interested in but stimulated by the courses.

## RESPONSE IN PERCENT TO

QUESTION NUMBER 10 HOW WOULD YOU DESCRIBE THE PRESENTATION OF THIS COURSE?

#11 HOW DO THESE TELEVISION COURSES COMPARE TO OTHER COURSES YOU HAVE TAKEN,  
EITHER BY TELEVISION OR IN THE CLASSROOM?

The television courses seem better than or equal to regular courses; 56 percent of the students felt they were about the same or better, while 37 percent felt it was difficult to compare. If the category "difficult to compare" is proportionately divided, then it is estimated that 89 percent felt the courses were the same or better than regular instruction.

#12 IF YOU WATCHED REPEAT BROADCASTS OF THE TELEVISION LESSONS, WHY DID YOU DO SO?

The credit students watched repeat broadcasts to make up lessons, while the non-credit students reviewed the lessons. However, in Latin America II, the credit students watched to review the lessons. This fact tends to support question 9 where the students commented that Latin America II was too difficult and consequently, they had to watch it twice. Only half the students indicated, however, that they watched repeat broadcasts. It should also be noted that repeat broadcasts were not available in New York City.

#15B IN WHAT WAYS DO YOU INTEND TO CONTINUE YOUR EDUCATION?

Fifty-five percent of the credit students intend to continue their education through a local institution.

Of those credit students who are not now continuing but who desire to do so, 42 percent would like to further their education by television.

When the credit and non-credit students who are not now continuing their education but have expressed a desire to do so are combined, 65 percent of the total would like to continue by television.

#16 WHAT TYPE OF COURSE DO YOU WANT ON TELEVISION?

Teacher-in-service, undergraduate non-credit and graduate non-credit accounted for 41 percent of the total. The category with the highest rating was undergraduate credit, preferred by 36 percent of the respondents, followed by graduate credit with 20 percent. It would seem that credit courses should be the main offering since these courses may also be taken by non-credit students.

#17 HOW OFTEN WOULD YOU BE WILLING TO ATTEND A CLASS MEETING AT  
A LOCAL COLLEGE TO OBTAIN EXTRA CREDIT IN A TELEVISION COURSE?

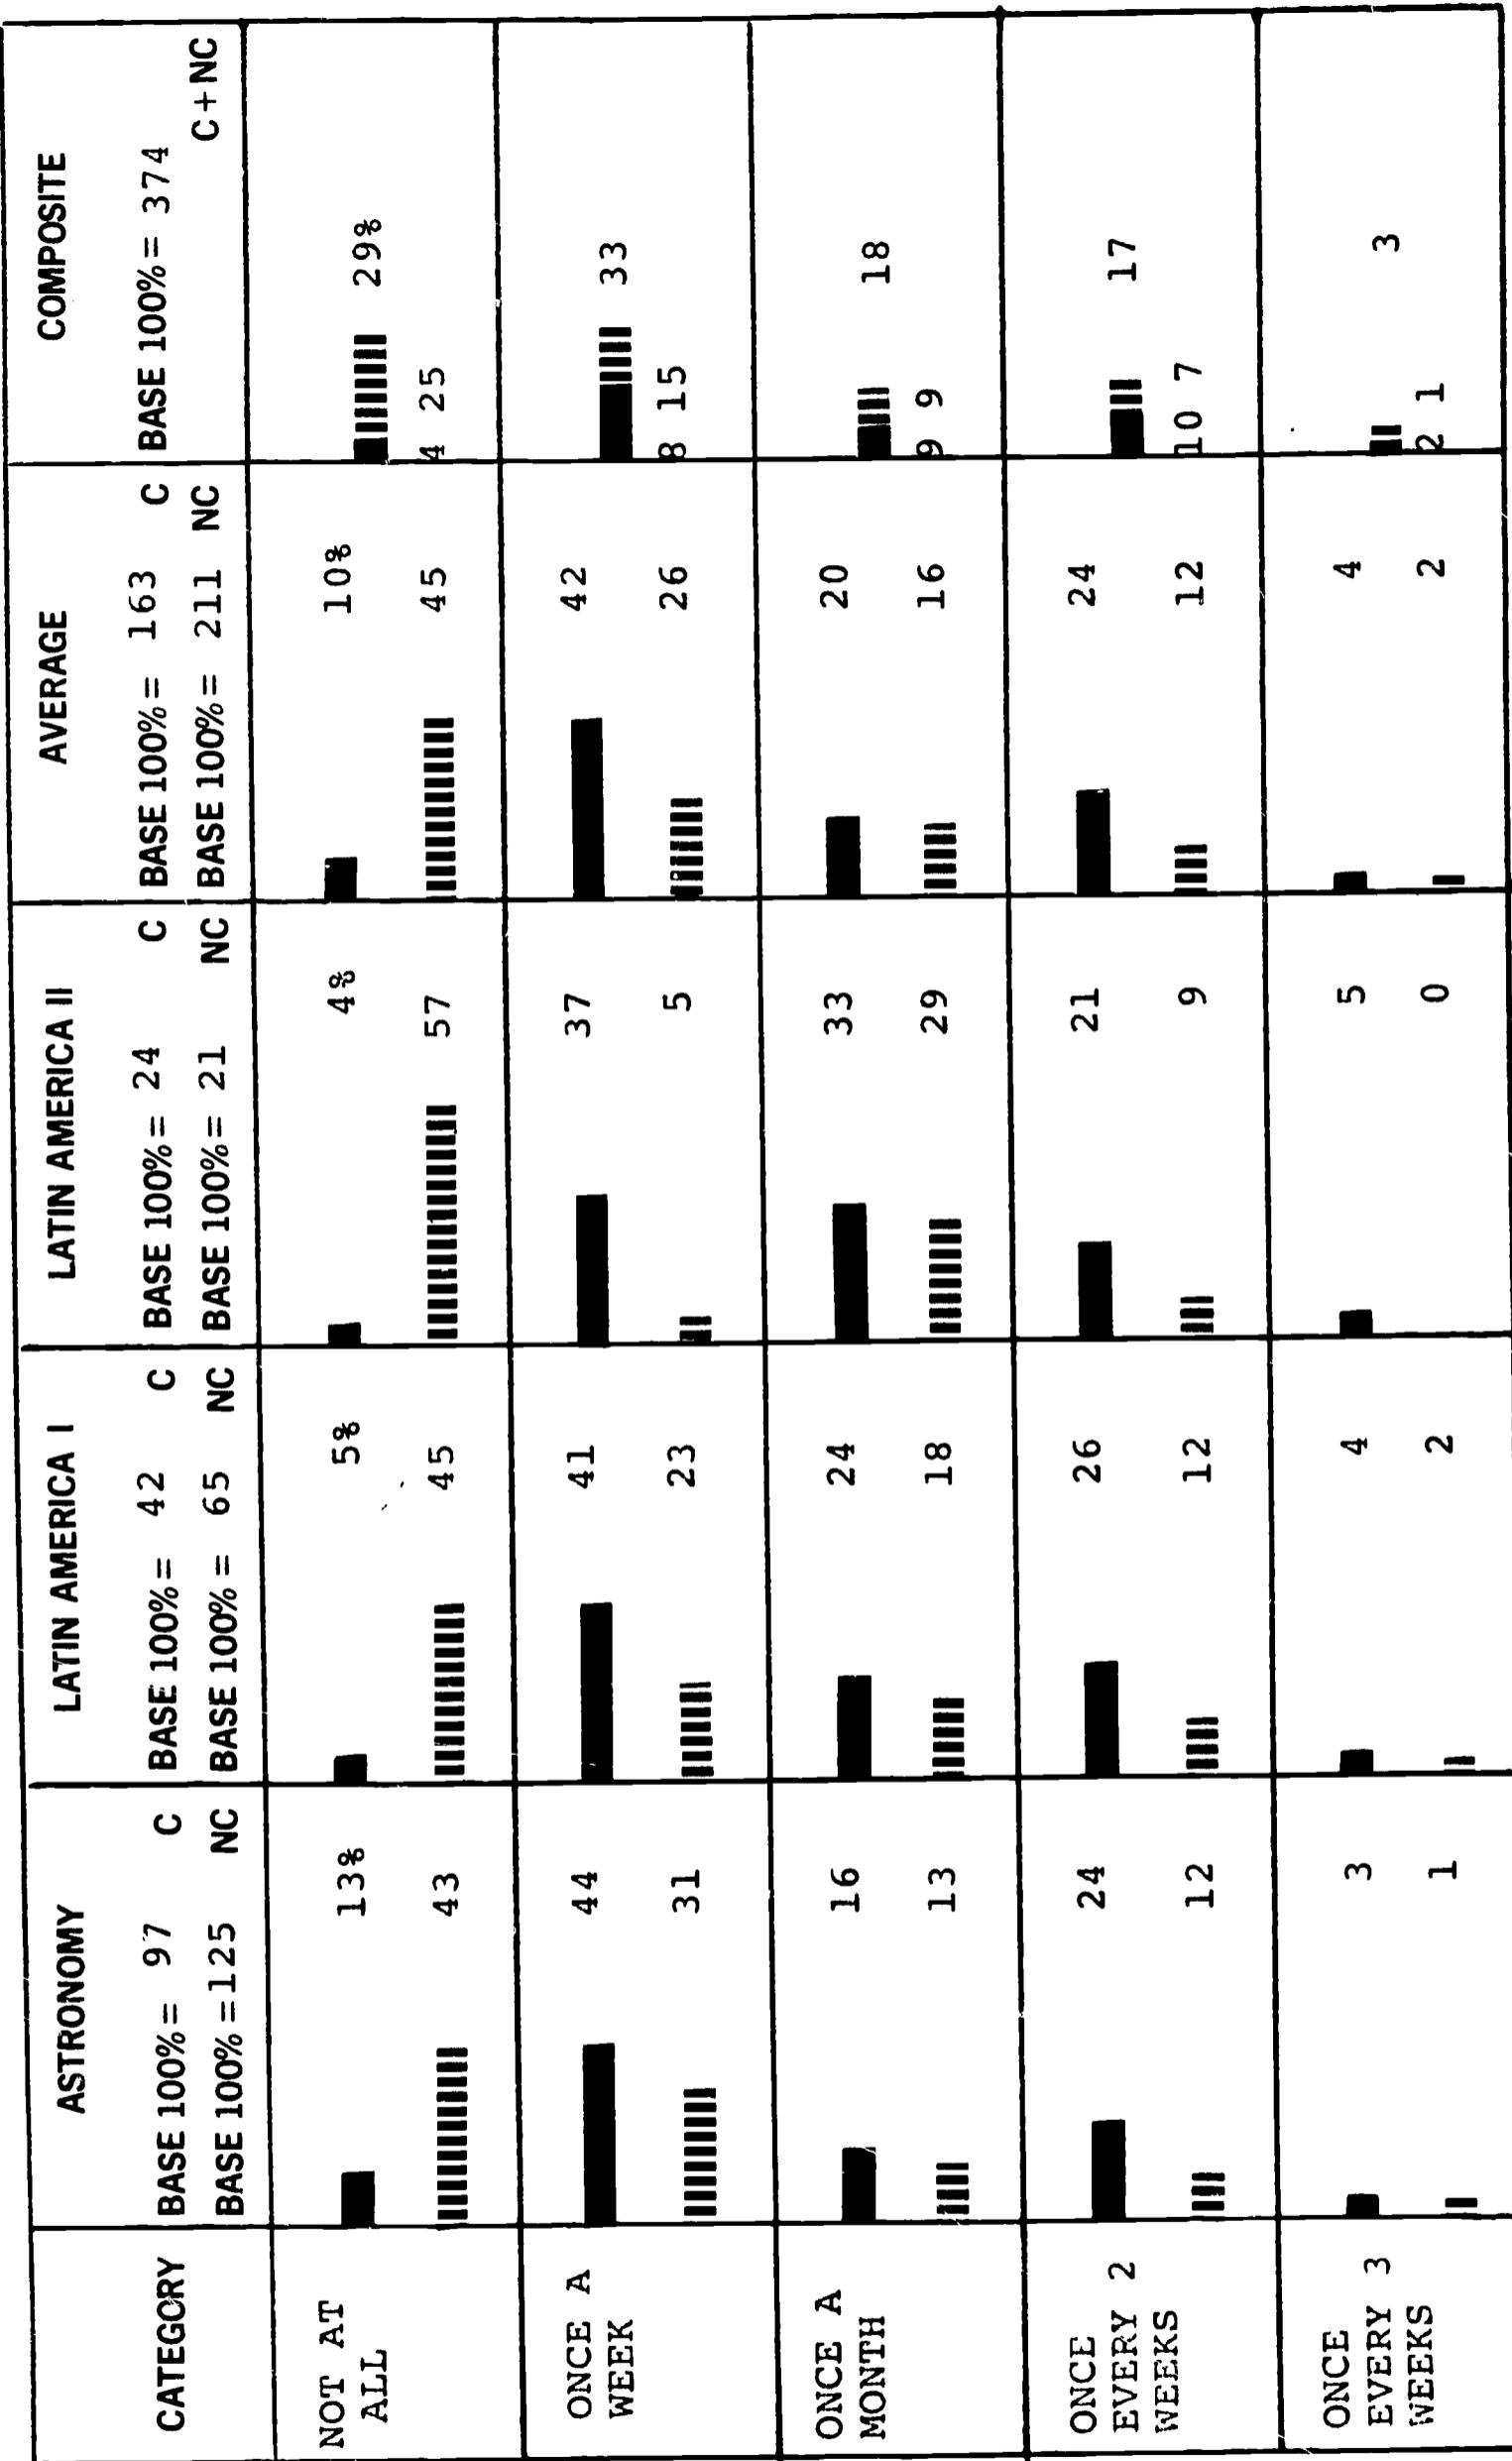

Once a week was the category most often selected by credit students and not at all was most often selected by non-credit students. However, if students are willing to attend once a week, they may as well take the entire course once a week on campus on an extension basis.

It should be noted that a television course is a new experience for most students who are accustomed to an instructor in the classroom. Perhaps each television course should be preceded by a lesson or two on how to study by television.

#18 WHAT IS YOUR OBJECTIVE(S) IN CONTINUING YOUR HIGHER EDUCATION?

Some 50 percent of the credit students selected an undergraduate degree as their goal, while 30 percent of them selected a graduate degree. Understandably, 74 percent of the non-credit students selected enrichment as their goal. Twenty-five percent of the non-credit students selected a degree as their goal indicating perhaps they have become interested in pursuing a degree oriented program. In the composite picture, 51 percent of the respondents selected enrichment, while 49 percent selected a degree.

**#19 WILL FURTHER COURSES ON TELEVISION HELP YOU ACHIEVE THIS GOAL?**

An overwhelming majority, 91 percent of both credit and non-credit students, felt television courses would help them achieve their goal. The reasons for their conclusions are listed below with the percent in each category.

<u>CATEGORY</u>	<u>BASE 100%</u>	<u>113C</u>	<u>BASE 100%</u>	<u>149NC</u>	<u>Composite C/NC BASE 100%</u>	<u>262</u>
(1) To achieve a broader background and increased knowledge	6%			58%		36%
(2) Convenient, saves travel time, Available at home	39%			19%		27%
(3) To accumulate credit and prepare for college	25%			10%		17%
(4) Can't go to college because of time, work, money	8%			10%		8%
(5) Depends on course	5%					3%
(6) Course I need not offered	7%			0%		3%
(7) Only if class meeting included	6%			0%		3%
(8) Prefer the classroom	4%			0%		1%
(9) Can't use any more transfer credits	0%			1%		1%
(10) No classroom pressure	0%			1%		1%

The "open-ended" responses were categorized into ten (10) categories and these are presented above. Actually, the first four categories account for 88% of the responses with the remaining 6 accounting for only 12%.

#20 HOW DID YOU FIND OUT ABOUT THIS TELEVISION COURSE?

The categories Newspaper, Television Ad, and Television Guide, account for 67 percent of the responses. The categories Newspaper, and Television Guide caused some confusion since the newspaper often contained a television guide. If these are considered as one, then Newspaper and Television Guide accounted for 48 percent of the responses.

Academic advisors were the primary source in only 5 percent of the cases and College Catalogs and Registration were the source in 7 percent. Mail, Brochures and Radio were not too effective.

The advertising dollar brought the most return from the Newspaper. The small amount of information contributed by the colleges perhaps reflects the efficiency of the other sources; prospective viewers called the college after reading, hearing or seeing an advertisement elsewhere.

#23 WHAT SUBJECTS WOULD YOU LIKE TO SEE ON FUTURE TELEVISION COURSES?

These are listed in order of preference in one list and alphabetically in the next.

A strength of television is shown on its courses in Latin America which enables a qualified instructor in a speciality to reach into many parts of the state where qualified instructors might not be available. Television also might serve well in such courses as basic college history or English where it can economically serve large numbers of students.

#24 WHAT COMMENTS DESCRIBE YOUR FEELINGS ABOUT LEARNING VIA TELEVISION?

The most interesting categories are those most often mentioned. That is, the students like its convenience, but miss student and teacher interaction. This is understandable as students have studied with teachers in the classroom for many years and need practice and experience in learning by television. The favorable comments outnumber the unfavorable comments, by more than five to one.

# 24 WHAT COMMENTS DESCRIBE YOUR FEELINGS ABOUT LEARNING VIA TELEVISION?

<u>COURSE #</u>	<u>COMMENTS</u>	<u># of STUDENTS</u>
EYE ON THE UNIVERSE	Miss teacher and student interaction	62
	Like media and its availability	44
	Enjoyable, relaxed, interesting	34
	Convenient, saves time	33
	Needs self discipline, takes more motivation	16
	Better than classroom	11
	Better instructors	10
	Efficient	8
	Better visuals	7
	Hard	7
	Need review lessons	7
	Like review by watching repeats	5
	Lab should be encouraged more	5
	Return tests to students	4
	A lot of distraction at home	3
	Repeat showings needed in NYC	3
	Better learning techniques can be used	2
	Hard to distinguish important material	2
	Follow up needed	1

#24 WHAT COMMENTS DESCRIBE YOUR FEELINGS ABOUT LEARNING VIA TELEVISION?

<u>COURSE #</u>	<u>COMMENTS</u>	<u># OF STUDENTS</u>
HISTORY OF LATIN AMERICA I AND II	Enjoyable, stimulates reading, challenging, enthusiastic, re- warding, interesting	65
	Convenient, saves time, easier	49
	Miss student teacher interaction	25
	Like media	13
	More self-reliance needed	6
	Better than classroom, no waste of time	6
	Would like more courses	6
	Good instructors	5
	Harder than classroom dislike	3
	Like to review by watching repeats	3
	Summaries and review lessons needed	2
	Requires adjustment to media	2
	More material can be covered	2
	Longer lecture time needed	1
	Teacher should go slower	1
	Good for some courses	1

#25 This is an "open-ended" question where the more than 400 written responses have been roughly categorized to aid in their interpretation.

The students in Astronomy, for example, liked the programs and generally gave positive comments. However, a closer look will reveal that the text is difficult to use because it's not too well organized. That is, it was written for students, but not field tested on students and reflects a competent astronomers view of beginning astronomy and not the students' view. It was organized for teaching, but not for learning. Other comments suggest that book stores might offer mail order service for books and other supplies.

In Latin America History the students felt it was a good course, but perhaps covered a little too much and could have concentrated on a country or two rather than a continent and a half. More like a history of the United States in which each state with its problems policies and people was studied individually.

#25 COMMENTS

EYE ON THE UNIVERSE

<b>Presentation</b>	Excellent, good, well done, well organized, very clear enjoyable Too fast at times, esp. over important facts	60	<b>Improve Broadcasting</b>	Not always consistent reception Not always shown on schedule	8
<b>Instructor</b>	Excellent, clear, knowledgeable well liked	55	<b>Tests</b>	Exam material stressed more Would like more convenient testing Offer non-credit tests Give example of questions in syllabus	6
<b>Quality and Content</b>	Subject made interesting Level good, summaries excellent Would like weekly assignment corrected over the air More than a basic course	25	<b>Time</b>	1/2 hour too short, 8:00 a.m. no use to teachers	6
<b>Visuals</b>	Excellent, helpful, like a lot of, helped to clarify Show spelling of new words, show visuals longer, use larger type	3	<b>Repeat lessons, help make clearer</b>	4	2
<b>Text</b>	Too hard, difficult to use, lecture too broad and simple in relation Had difficulty purchasing, need knowledge of source	26	<b>Offer more courses, esp. summer</b>	7	5
<b>Registration</b>	Lack of information esp. for credit More time for fee payment, can credits be transferred	8

**#26 & #27 DISTRIBUTION BY COURSE AND REGISTRATION**

Forty percent of the viewers were credit students and sixty percent non-credit. Astronomy accounted for more students, credit and non-credit, than the other two courses combined.

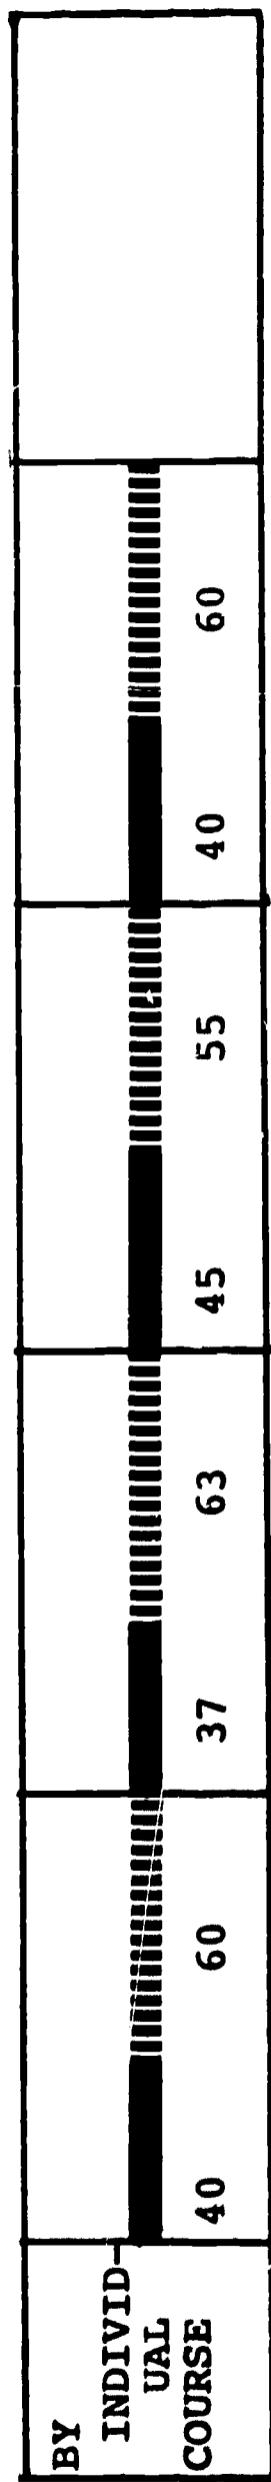

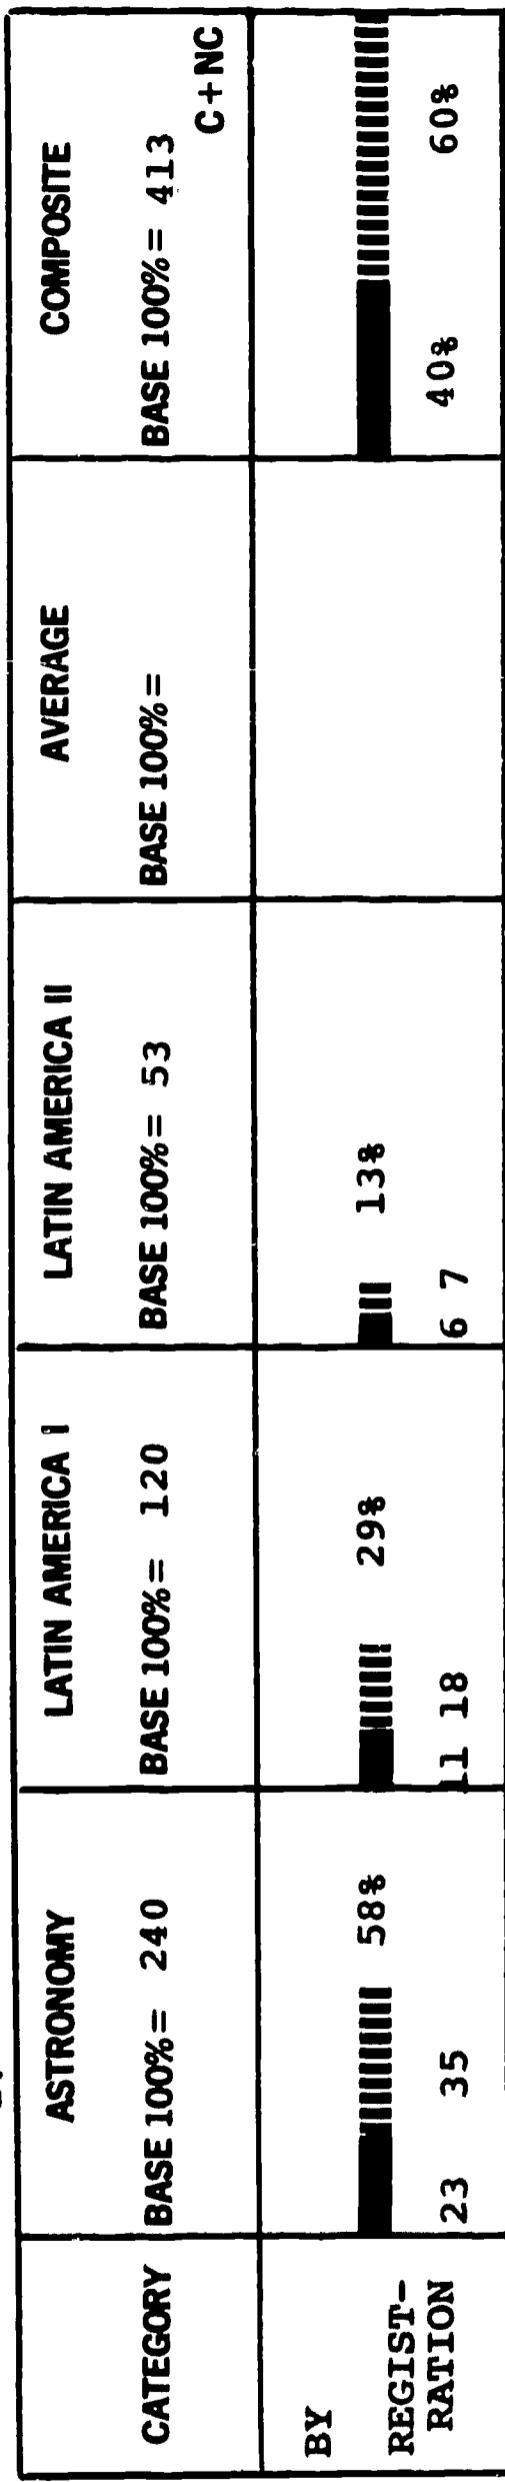

RESPONSE IN PERCENT TO

QUESTION NUMBER 26 DISTRIBUTION BY COURSE AND REGISTRATION

27

C-CREDIT

KEY: NC-NON-CREDIT 

#28 DISTRIBUTION OF EDUCATIONAL LEVEL

A quarter of the viewers were either in high school or had completed high school. Junior College viewers were 10 percent of the total. College students, 38 percent, represented the largest group. And the second largest group were those who had completed college. There however, was some confusion on the question as many freshmen and sophomore students placed themselves "in college" rather than "Junior College". So it seems prudent to combine "Junior College" and "College" and this new category contains 50 percent of all credit students and 44 percent of the non-credit students or 48 percent of the total group. College students or those aspiring to be college students are almost three quarters of the viewers.

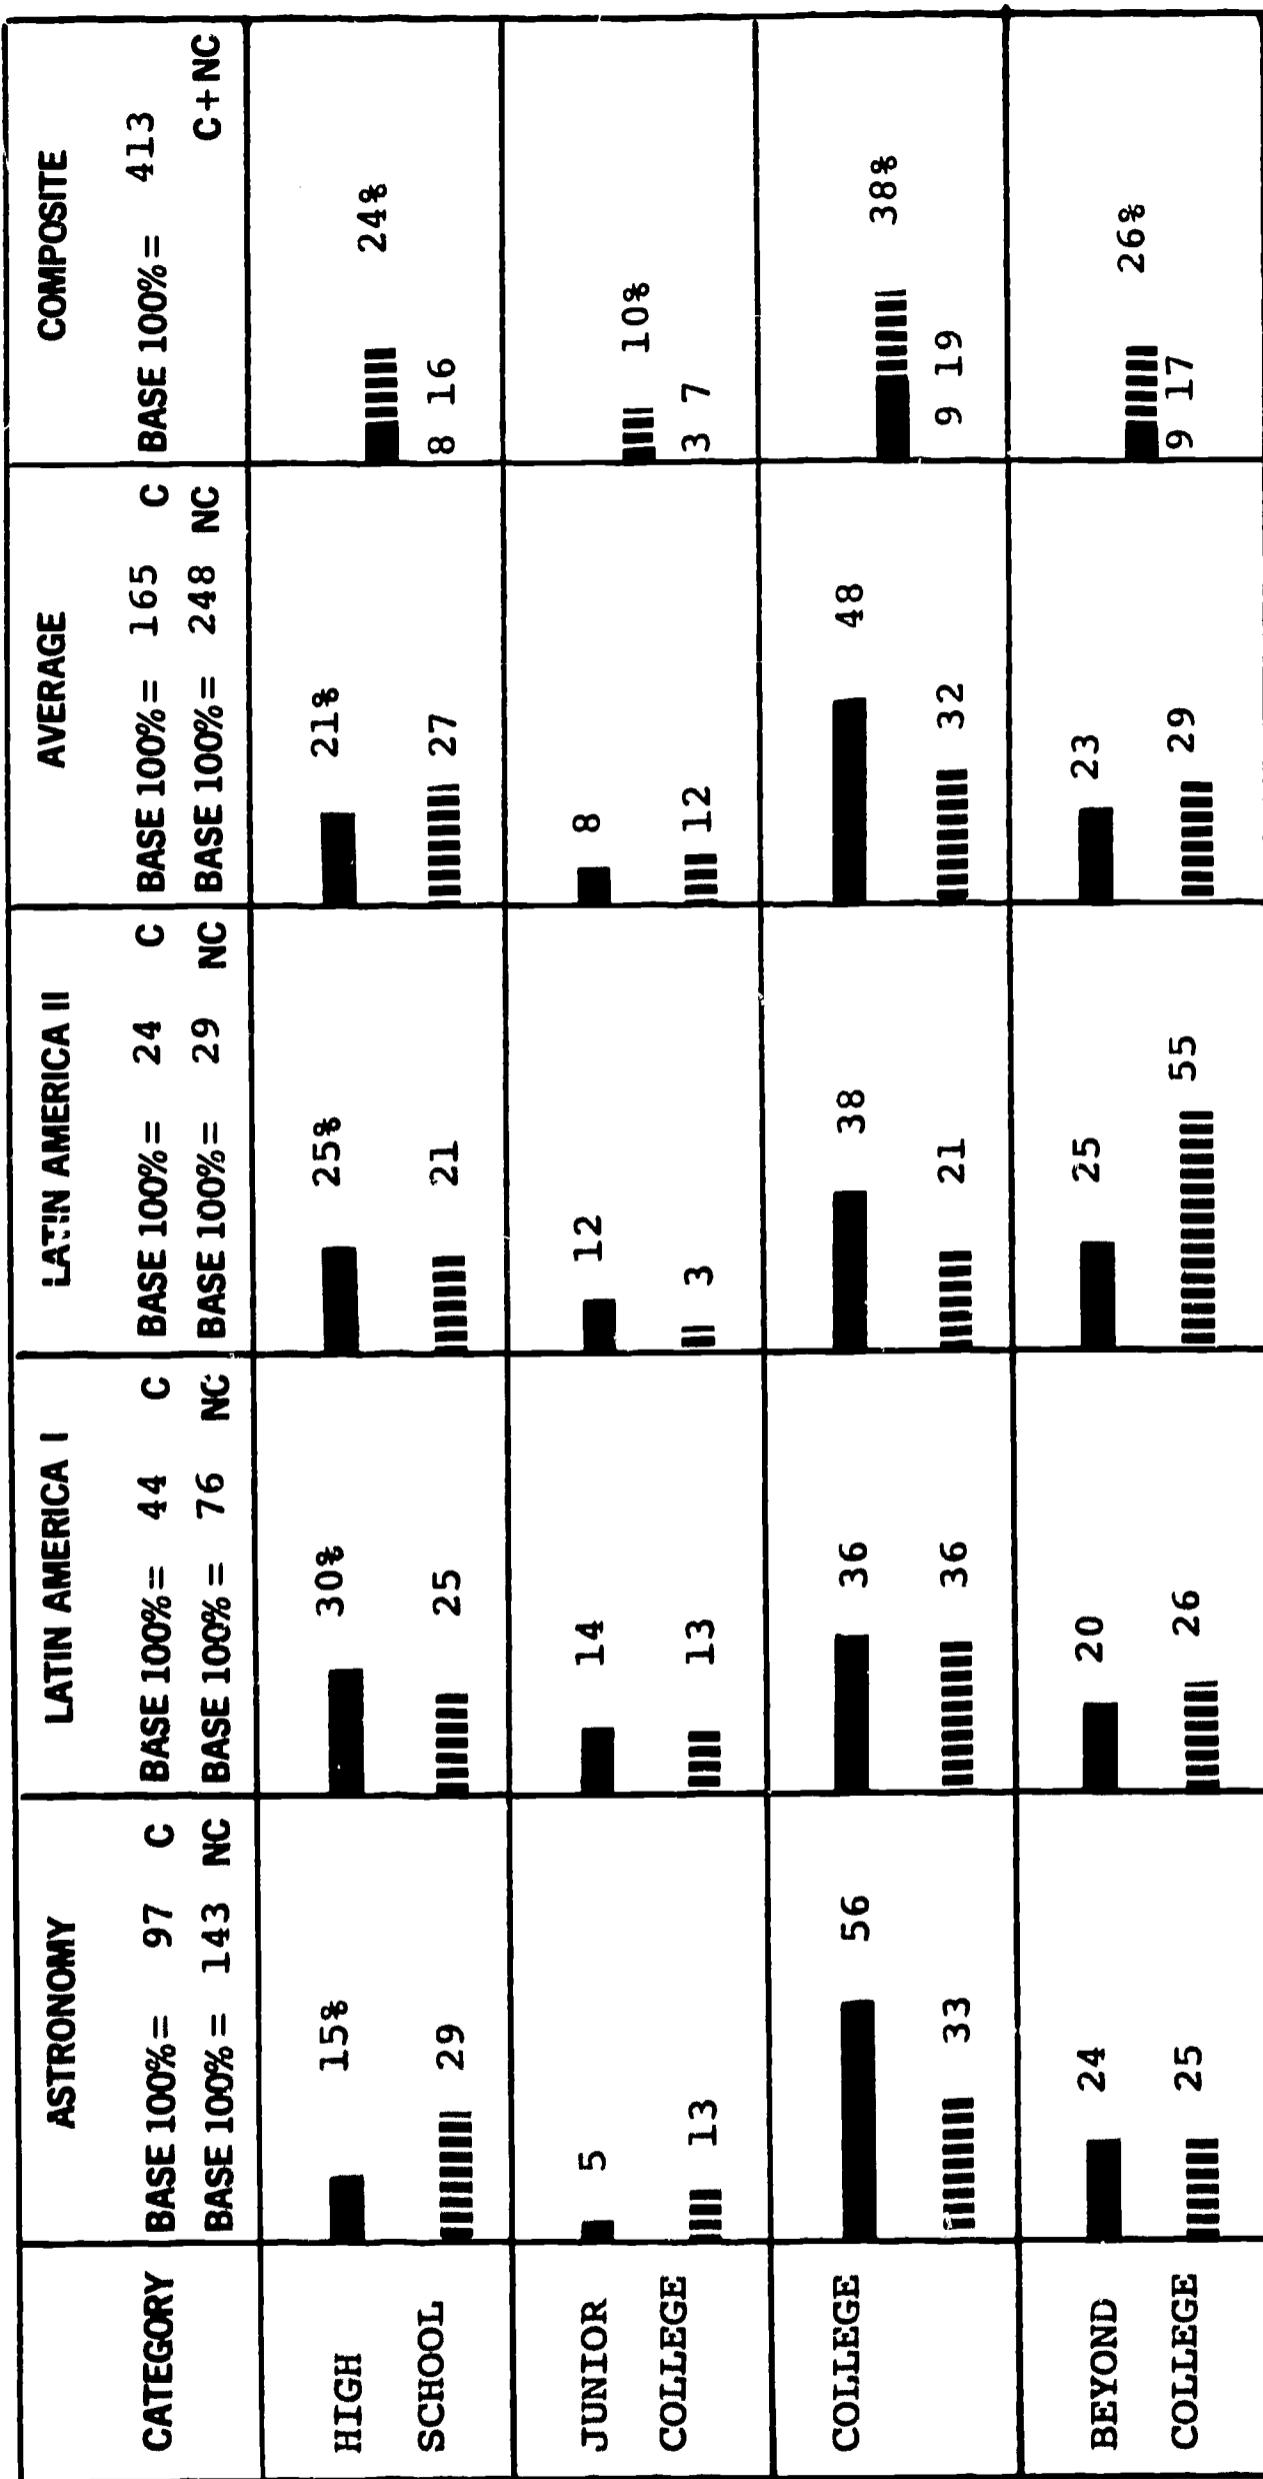

### RESPONSE IN PERCENT TO

QUESTION NUMBER 28 DISTRIBUTION OF EDUCATIONAL LEVEL

**C-CREDIT**      **NC - NON-CREDIT**

**KEY:**

#29 DISTRIBUTION BY SEX

This, of course, turned out to be an approximately equal division. However, the females tended to take the social sciences or history courses while the males predominated in the scientific course, astronomy.

#30 DISTRIBUTION BY AGE

Sixty-three percent of the viewers were over 31 on a composit basis while 59 percent of the credit students and 68 percent of the non-credit were over 30. 5 percent were under age 16 with the remaining 32 percent between 17 and 20. Ten percent of the credit students were 16 or under. Question 28 indicated that almost three quarters of the viewers were college students or those aspiring to be students, while Question 31 indicated that 21 percent actually had the occupation of students and a quarter of these (based on age) were high school students. College students actually make up about 15 percent of the total group in so far as occupation is concerned, but those who are college students, part-time students, and high school students make up approximately 75 percent of the total. This indicates that approximately 50 to 60 percent of the total group are part-time students with some college credit or degrees. These people are skilled workers, professionals, housewives and teacher, and somewhat older than the usual college student.

## RESPONSE IN PERCENT TO

### #31 DISTRIBUTION OF RESPONDENTS BY OCCUPATION

The credit viewers in Astronomy were mainly students, while housewives were the main credit viewers in Latin America I and II. Overall, housewives accounted for 23 percent of the viewers; followed by teachers, 21 percent; students, 21 percent; professionals, 19 percent; skilled, 12 percent; and retired, 4 percent. Credit wise, students made up 40 percent of the viewers and "teachers", 27 percent. Students and teachers together were 67 percent of the credit viewers. Adding housewives brings the total to 87 percent so that these three groups were the primary credit audience.

Professionals, skilled workers, and housewives, made up 68 percent of the non-credit viewers. Adding teachers brings this total to 85 percent.

#### OCCUPATION AND LOCATION CORRELATION

An array was made in the preceding charts showing the location and occupation of the credit and non-credit students. This was made to give some indication of who took what, where, and it yielded some interesting results. For example, 62 percent of the credit viewers in Astronomy were students. That is of the 97 credit viewers 61 were students, but of the 61 students 51 or 84 percent were registered in Albany with the remainder of the state accounting for only 16 percent of the student credit population. This seems to indicate that the students or the various schools were not too well informed or were not advised to take a credit television course. More non-students for example registered for credit in Oswego and New York than students. Students comprised only 12 percent of the credit viewers in Latin America I. It must be kept in mind that this is based on those who answered the questionnaire and not the total registration. However, it is quite indicative of who was taking what. Students registered for credit in Latin America II not even in Buffalo where the series was produced.

Basically this chart indicates that students took little advantage of the television courses. But perhaps this is to be expected when so much regular instruction is at hand in the schools. These are summarized below.

COMMENTS FROM THE OCCUPATION AND LOCATION CORRELATION IN TABLES IV, V, AND VI.

**In Astronomy:** The highest percentage of credit viewers were students 62%  
The highest percentage of non-credit viewers were professional 28%

Albany had the highest percentage of credit viewers 69%  
New York had the highest percentage of non-credit viewers 37%

**In Latin America II:** The highest percentage of credit viewers were housewives 34%  
with teacher at 33%

The highest percentage of non-credit viewers were housewives 43%

Buffalo had the highest percentage of credit viewers 30%  
Geneseo and Onondaga shared the highest percentages of non-credit  
viewers 23%

**In Latin America II:** The highest percentage of credit viewers were housewives 51%  
The highest percentage of non-credit viewers was shared by  
teachers and professionals 27%

Buffalo had the highest percentage of credit viewers 67%  
Albany had the highest percentage of non-credit viewers 47%

One of the purposes of this survey is to evaluate the television programs in terms of the information obtained from the questionnaires. Another purpose is to draw conclusions and implications to point the way toward future development. The latter is perhaps more important than the former.

The programs were quite successful from the point of view of the viewers who enjoyed and appreciated them. The programs were viewed for credit and enrichment. Astronomy was an excellent choice as it was a basic scientific program so necessary in undergraduate work. Latin America I and II made excellent teachers available to the entire state in a subject field where there is a scarcity of good teachers.

They were offered as college credit courses, but they could also be taken for enrichment which is a good arrangement. The viewers felt the courses were as good or better than the average college course. Thus, from many points of view the courses were quite successful as a venture into this field.

The courses were not successful from other points of view. The size of the audience was indicative of a lack of publicity or understanding on the part of the students, teachers and public. Some aspects of the courses were not too well planned, and students found parts of them confusing, difficult or vague. The courses were as good or better than other college courses, but with the time and effort that went into them they should have been far superior to the average college course. In general the

courses were like other television courses.

The courses, with perhaps the possible exception of some of the astronomy programs, were remakes of classroom courses where television was used to stimulate classroom teaching. The result was that the courses were good classroom programs, but not tremendous fare for television. The programs were designed for classroom teaching, but were not designed for television learning. Learning, whether for credit or enrichment, is the ultimate goal of television courses. These courses offered a great deal of excellent teaching but were not programmed for optimum learning, and learning is the goal.

It is suggested that the courses be field tested on selected groups of students before they are released for state wide use. This evaluation and correction can be done on a process basis rather than waiting until a series is complete. That is, after completing the first half dozen programs, they could be field tested with a student response system and revised while the others are in production. It should be noted that even increasing the learning effectiveness of a course or the television part of a course will not necessarily improve the total course by a large amount. The student still has to do a lot of work outside of the course. It will, however, substantially improve that portion of the course over which we have direct control. Many students have been out of college quite some time, and perhaps a few programs on learning by television might be useful. This is particularly needed to

show students the large amount of outside work which they must do on their own. Working by themselves is a new type of learning situation for many students, and they need guidance in this area.

Publicity for the programs should be increased, especially on-campus, so that advisors, deans and registrars are fully informed of the courses. This may be a reflection of an attitude toward televised education. This varies from location to location; the Albany area was one in which there was a great deal of publicity, and the faculty was very interested in having their students watch the programs over television. The State University of New York at Albany also provided facilities for the on-campus viewers to watch the programs.

Programs in basic freshman English or remedial English or basis freshman history courses might be offered. It is assumed that large numbers of students will watch such courses and give them a firm economic base. A beginning English, social science or unified course might be a good one to put on a systems basis where it is field tested and corrected before going on a state wide basis.

The last note in these conclusions and implications is that any major undertaking such as a television series should have evaluation built into it. If the university is going to expend many thousands of dollars on a series, than a certain percentage or amount should be built into the budgets of academic or continuing education programs so that their effectiveness and worth can be

determined for future budgetary needs.

These television courses were good, but needed some improvement, ways and means of improving them have been suggested. These are intended in a spirit of constructive criticism which is one of the reasons for an evaluation of a program. Ordinarily, non-television college courses are usually not evaluated by the students and no formal evaluation or criticism is available to most instructors. The results of this survey must be interpreted in that light. That is, these courses over television were evaluated and some criticisms noted, but they were still as good or better than most college courses according to the viewers response.

#### S U M M A R Y

1. The programs were useful and well received by the students.
2. Programs should be field tested for learning before they are shown on a state wide basis.
3. There should be more publicity, especially on-campus publicity.
4. Basic courses such as freshman English or history might have a larger audience.
5. Evaluation should be built into major undertakings.
6. Students should be oriented toward televised instruction.
7. A random state wide sample or viewers and/or current non-viewers might give a more comprehensive view of the needs in the state.

STATE UNIVERSITY OF NEW YORK AT ALBANY  
Instructional Resources Center  
Research Division

Television Questionnaire  
FALL 1966

Name \_\_\_\_\_

Address \_\_\_\_\_

1. How many of the television lessons did you view?

the first few  
 about half  
 most of them  
 all of them

2. When did you view the television lessons?

morning  
 afternoon  
 evening  
 at different times

3. Where did you register for the course and/or receive the syllabus?

Albany       Oswego  
 Buffalo     Onondaga  
 Brockport    Com. Coll.  
 Geneseo       Box # in NY

4. Did you take notes while viewing these television courses?

rarely  
 occasionally  
 fairly often  
 most of the time

5. What times would be the most convenient for you to view television lessons?

Weekday

Saturday

Sunday

morning

afternoon

evening

7:00 - 8:00  
 8:00 - 9:00  
 9:00 - 10:00  
 10:00 - 11:00  
 11:00 - 12:00

12:00 - 1:00  
 1:00 - 2:00  
 2:00 - 3:00  
 3:00 - 4:00  
 4:00 - 5:00  
 5:00 - 6:00

6:00 - 7:00  
 7:00 - 8:00  
 8:00 - 9:00  
 9:00 - 10:00  
 10:00 - 11:00  
 11:00 - 12:00

6. How helpful was the syllabus in learning the material in the television courses?

it was helpful  
 it was not helpful

7. Did you buy the textbook(s) for this television course?

yes  
 no

8. Was the textbook helpful in learning the material in this television course?

yes  
 no

9. How would you describe the content of this course?

too hard     too easy  
 just right     didn't understand

10. How would you describe the presentation of this course?

dull  
 interesting  
 stimulating

11. How do these television lessons compare to the other courses you have taken, either by television or in the classroom?

better than  worse than  
 about the same  difficult to compare

12. If you watched repeat broadcasts of these television lessons, why did you do so?

to make up a lesson missed  
 to review a previous lesson

13. When did you last take a college course other than this particular television course?

within last year  never  
 within last 2 years  
 within last 4 years  
 more than 4 years ago

14. In what way(s) are you presently continuing your higher education other than this television course?

not now continuing my higher education  
 as a full-time credit student  
 as a part-time credit student  
 as a non-credit student

How are you doing this?

attendance at a local institution  
 television courses  
 correspondence courses

15. If you are not now continuing your higher education, in what way(s) do you plan to do so?

do not intend to continue  
 as a full-time student (credit)  
 as a part-time student (credit)  
 as a non-credit student

How do you plan to do this?

attendance at a local institution  
 television courses  
 correspondence courses

16. What type of course do you want on television?

graduate credit  
 under-graduate credit  
 teacher in-service credit  
 graduate non-credit  
 under-graduate non-credit

17. How often would you be willing to attend a class meeting at a local college to obtain extra credit in a television course?

not at all  once a month  
 once a week  once every 2 weeks  
 once every 3 weeks

18. What is your objective(s) in continuing your higher education?

under-graduate degree  
 graduate degree  
 not for degree, but for personal enrichment

19. Will further courses on television help you to achieve this goal?

yes  no

Why? \_\_\_\_\_

\_\_\_\_\_

\_\_\_\_\_

20. How did you find out about this television course?

---

---

21. What program(s) in this television course did you like best and why?

---

---

22. Which program(s) in this television course did you like least and why?

---

---

23. What subjects would you like to see on future television courses?

---

---

24. What comments describe your feelings about learning via television?

---

---

25. We would appreciate any additional opinions or comments that you may have regarding your experience in viewing this college credit television course.

We are particularly interested in your comments relating to the quality and content of the subject material, its presentation by the instructor, and the television production and broadcast.

We also want to know how we may better help you to continue your higher education with future television credit courses.
